

Law Enforcement agencies human factor methods and Toolkit for the Security and protection of CROWDs in mass gatherings

This project has received funding from the European Union's Horizon 2020 Research and Innovation programme, under grant agreement No. 740466

Goals of the project

LETS-CROWD will overcome challenges preventing the effective implementation of the European Security Model (ESM) with regards to mass gatherings. This will be achieved by providing the following to security policy practitioners:

A dynamic risk assessment methodology for the protection of crowds during mass gatherings centred on human factors in order to effectively produce policies and deploy adequate solutions

A policy making toolkit for the long-term and strategic decision making of security policy makers, including a database of empirical data, statistics and an analytical tool for security policies modelling

3

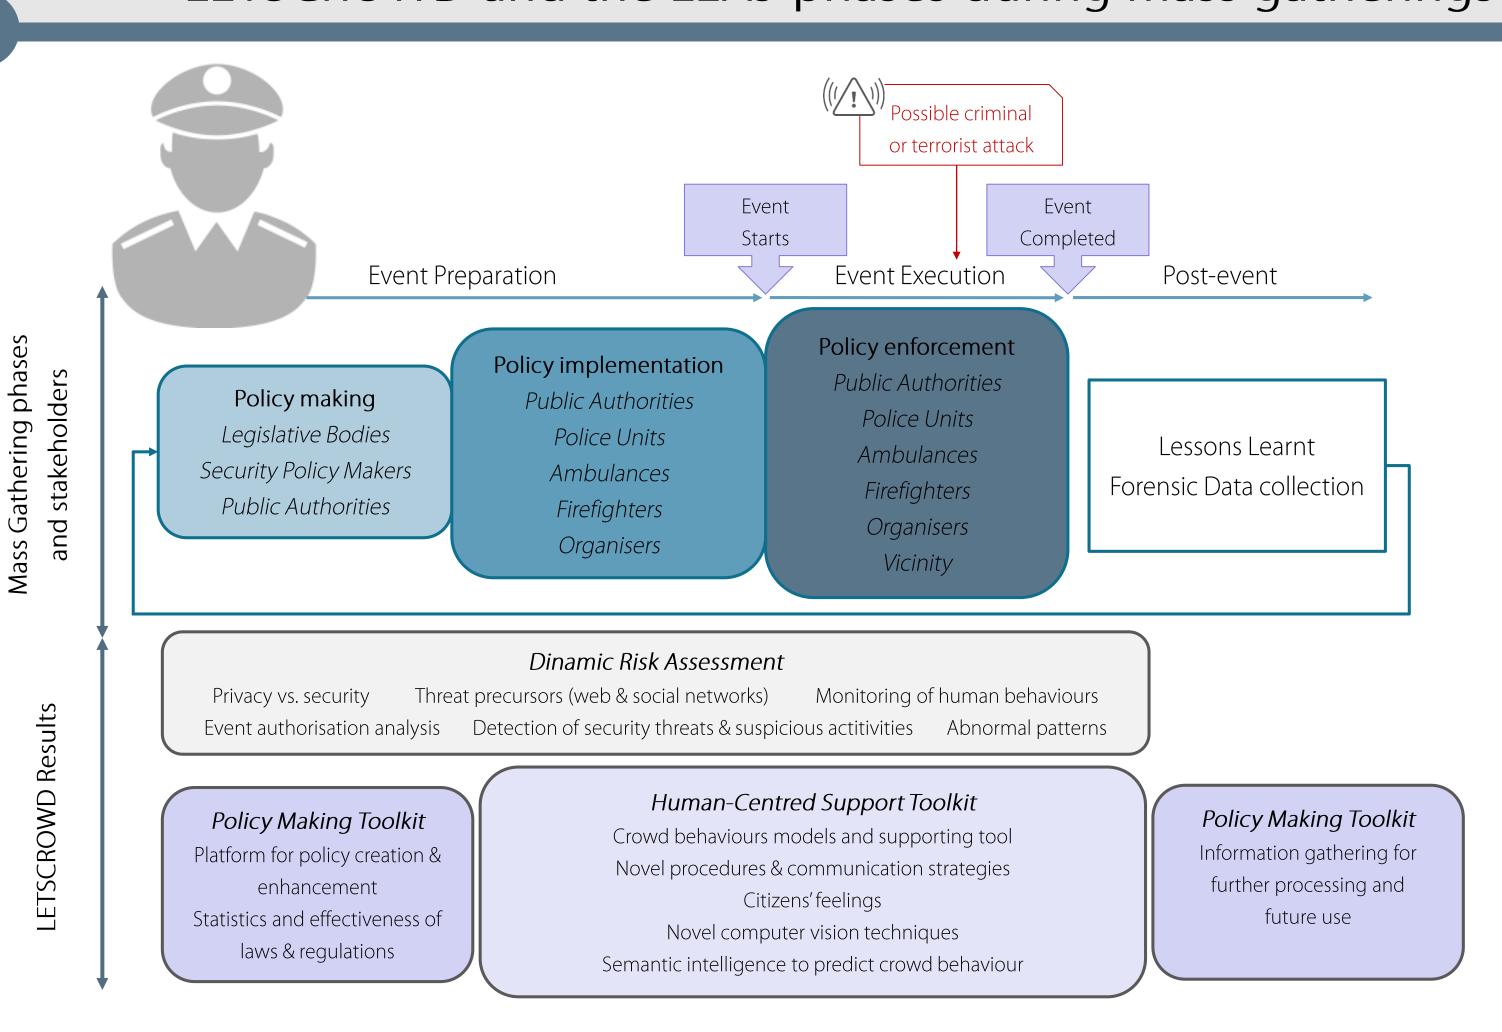

A set of human centred tools for Law Enforcement Agencies (LEAs), including real time crowd behaviour forecasting, innovative communication procedures, semantic intelligence applied to social networks and the internet, and novel computer vision techniques.

I. Develop a common European understanding about security issues for crowd protection

- during mass gatherings II. Develop a Policy-making platform for security policy-makers
- III. Develop human-centred Toolkit for LEAs
- IV. Perform practical demonstrations to assess project outcomes
- V. Analyse public opinion or mood on mass scale in relation to policies and actions for protecting people in mass gatherings against criminal and terrorist acts
- VI.Dissemination, communication of results and post project deployment and large scale
